

Javascript Style Guide

1. Use double quotes (") for JSX attributes, and single quotes (') otherwise (')
 - a. // good
`<Foo bar="bar" />`
 - b. // good
`<Foo style={{ left: '20px' }} />`
2. Use PascalCase for React components and camelCase for prop names
 - a. `<Foo
 userName="hello"
 phoneNumber={12345678}
 Component={SomeComponent}
/>`
3. Include single space in closing tags
 - a. // good
`<Foo />`
4. Use id for keys instead of indexes
 - a. // good
`{todos.map(todo => (
 <Todo
 {...todo}
 key={todo.id}
 />
))}`
5. Wrap JSX in parentheses if they exceed one line
 - a. `render() {
 const body = <div>hello</div>;
 return <MyComponent>{body}</MyComponent>;
}`
6. Close tags on new lines if there are multiple properties
 - a. // good
`<Foo
 bar="bar"
 baz="baz"
/>`
